

AI at Scale

Accelerating Enterprise Value Through Data, Intelligence, and Responsible AI

ITSDA

Data, AI and Information Products & Services

August 17, 2026

Challenges, Drivers & Strategic Opportunities

CHALLENGES & DRIVERS

CHALLENGES

- Fragmented data, silos, and AI-ready information gaps.
- Governance, risk, privacy, and trust challenges
- Data and AI literacy and adoption barriers.
- AI operationalization, scaling, and value realization challenges.

DRIVERS

- One WBG Transformation and Operating Model Modernization
- Need for trusted Data and AI Enablement
- Decision Intelligence and Business Agility
- Platform Rationalization and Operational Efficiency
- Enterprise Scale Adoption of Self-Service and AI

STRATEGIC OPPORTUNITIES

Deliver consistent, scalable AI solutions through reusable patterns and practices.

Reusable AI capability provider

Bridge between business needs and AI innovation.

Integrated governance and scaling function

Product transformation team driving AI adoption across WBG

Workflow automation with Next-generation AI capabilities

BUSINESS VALUE

Increase workforce productivity through AI-enabled automation.

Accelerate decision-making with trusted data and insights

Improve **enterprise data discoverability** and reuse.

Scale **adoption of trusted and governed** AI solutions.

Enhance operational efficiency while reducing costs and risks.

Enable sustainable innovation through reusable AI capabilities.

AI at Scale: Mission and North Star

MISSION

...“Leverage AI to **accelerate** and **sustain** development impact and to build **AI as a strategic capability** that enhances the organization's work...

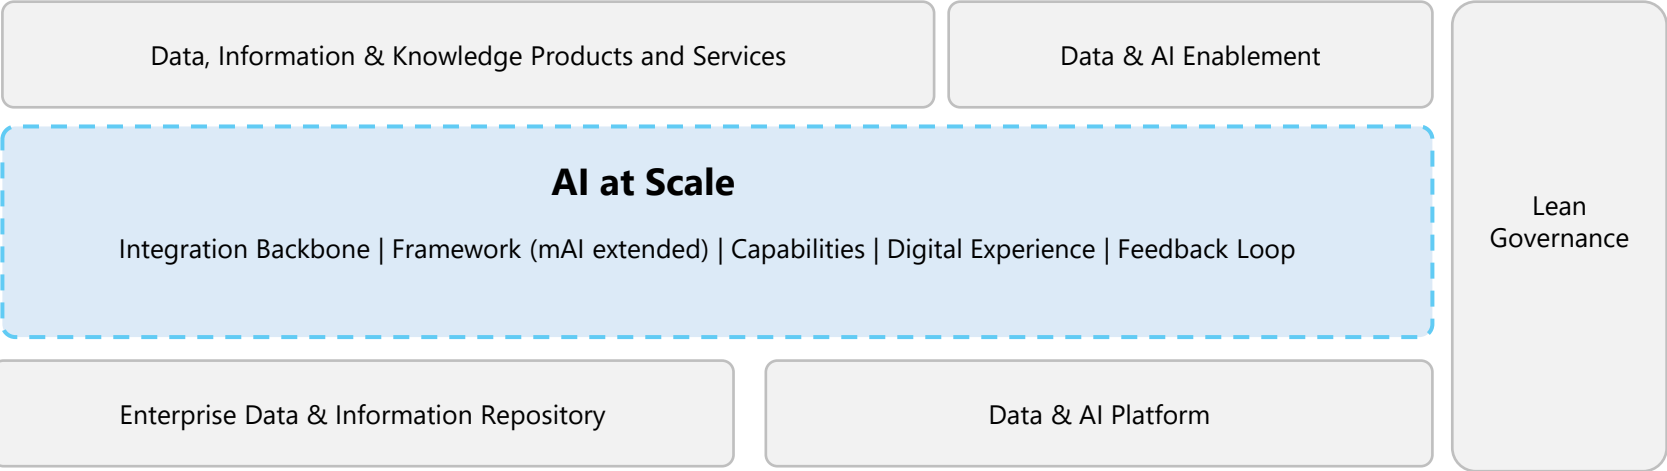

NORTH STAR

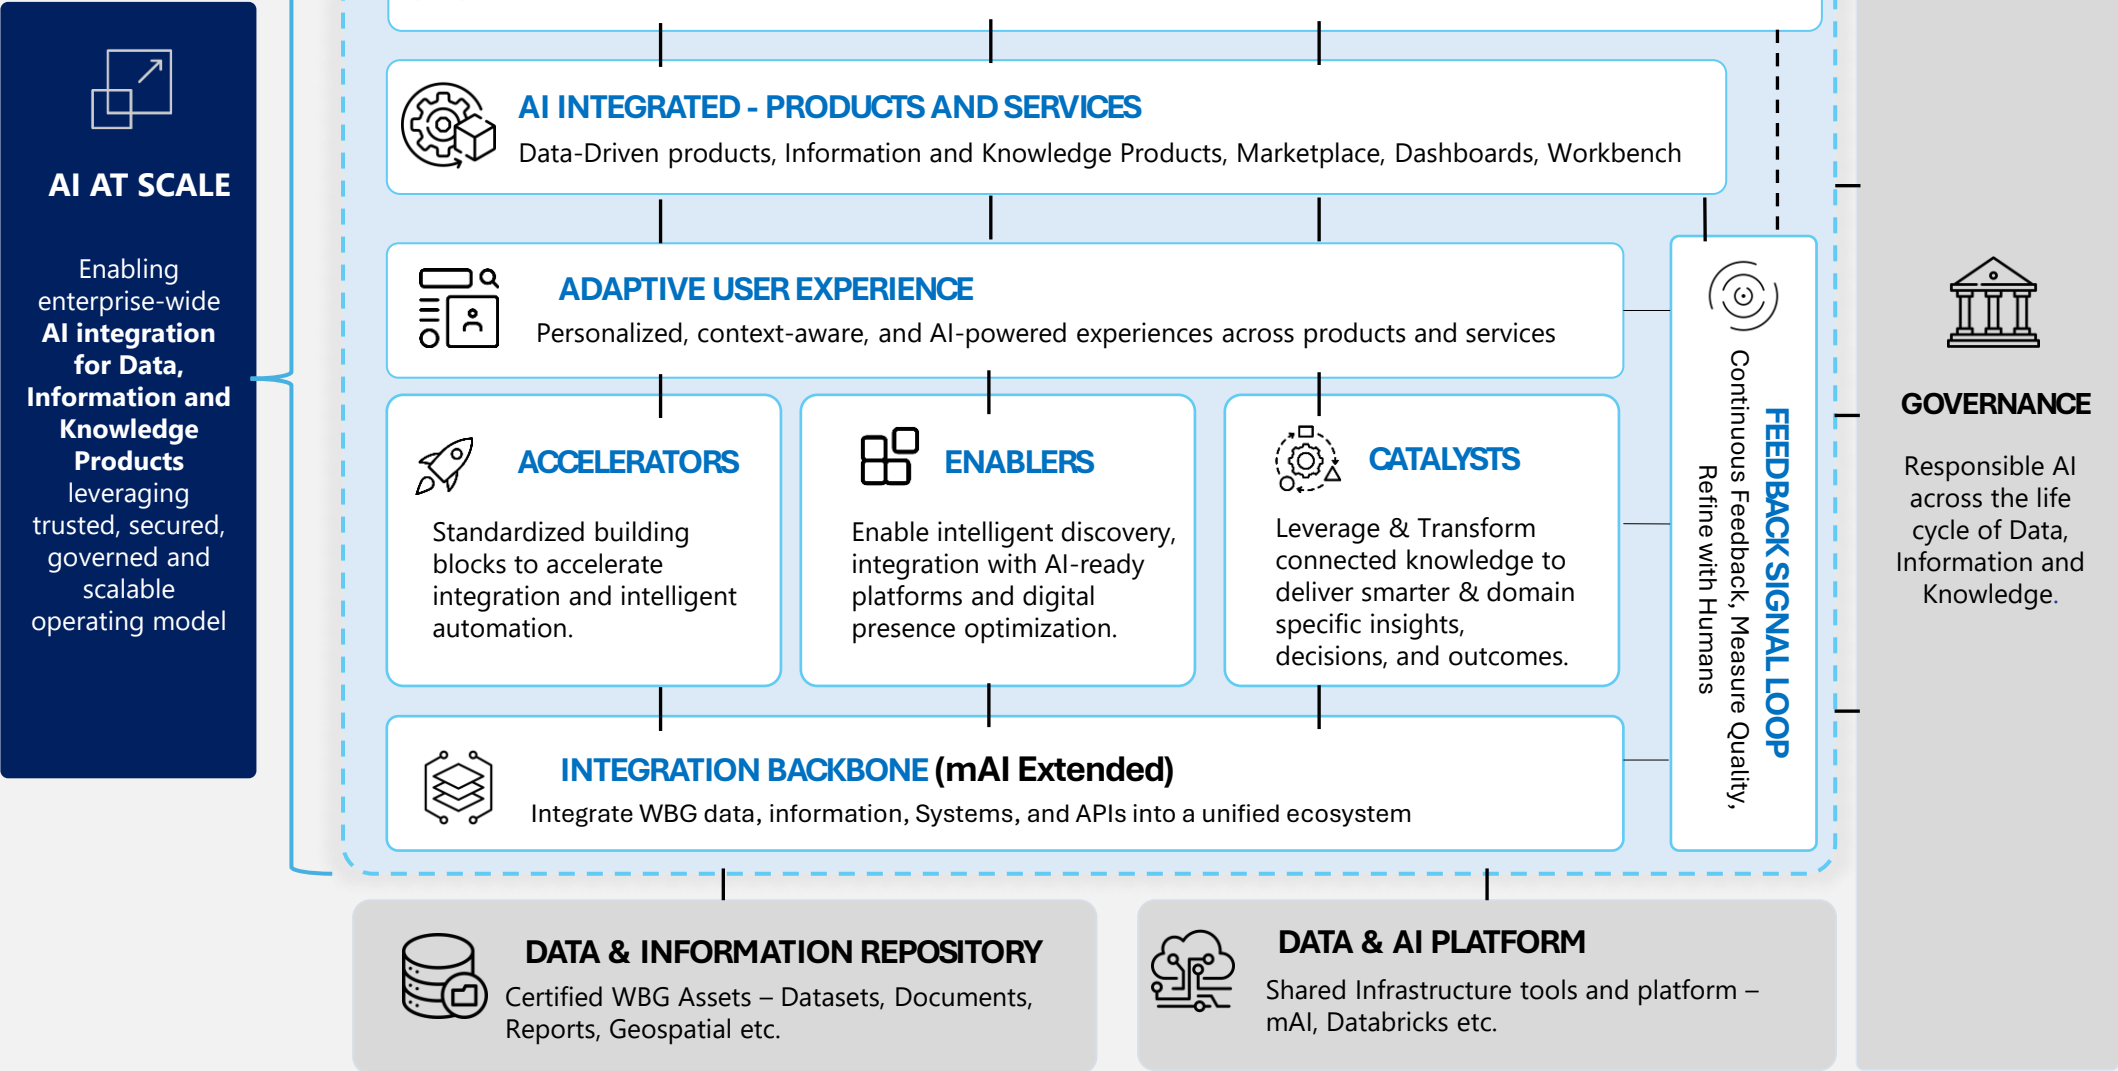

Integrate **trusted, responsible, evidence-driven** AI Capabilities / Features into **WBG products, services, workflows**, and decisions using **AI-ready data, information** and **knowledge** assets.

STRATEGIC ALIGNMENT

AI at Scale: Capability Overview

AI at Scale Capability Roadmap

Progressively build trusted foundations, connect enterprise intelligence, optimize outcomes, and scale AI-enabled delivery.

Implementation Roadmap

Detailed plan across work streams

	FY27-Q2	FY27-Q3	FY27-Q4	FY28-Q1	OUTCOMES
DEVELOPMENT DATA ECOSYSTEM	• Authoritative catalog & identifiers • Self-service access & cost transparency	• Knowledge graph linking data, metadata and code • AI assisted reproducible research through linked data and code.	• AI search & natural-language discovery • AI harmonization & quality assurance	• Embedded AI-assistant discovery • Agent-ready data access	Trusted data in minutes; AI in the workflow
UNIFIED KNOWLEDGE REPOSITORY	• Repository Platform Rationalization & AI-readiness Assessment	• Unified repository architecture (design) • Metadata Manager, Persistent Identifiers & Knowledge Graph Design	• Publishing Gateway, AI-powered Curation, Search & Enrichment Workflow • Metadata Manager, Persistent Identifiers & Knowledge Graph Implementation	• Unified Repository Architecture Implementation • AI based Curation and Enrichment	AI-powered discovery for staff & public
ACCELERATED DATA CONSOLIDATION — STRUCTURED	• WBG asset & data-modernization playbook • AI-readiness & AI-scaling playbook	• Unified AI marketplace (design) • AI-ready integration backbone (design)	• Product AI enablement & taxonomy • Data-as-a-product & lifecycle	• AI search, copilots & personalization • Marketplace launch (internal & external)	AI-ready structured ecosystem at scale
ACCELERATED DATA CONSOLIDATION — UNSTRUCTURED	• Repository rationalization & target architecture.	• Unified MCP & AI search (design) • AI-readiness, metadata & process (design) • Ontology-driven knowledge structures	• MCP & RAG service (build) • AI readiness + disposition workflows	• AI governance, compliance & licensing • Auto-tagging & AI enrichment • Publishing to AI marketplace	Scaled AI knowledge services & discovery

Foundations → Connected Intelligence → AI-Enabled Experiences → Governed AI at Scale

Development Data Ecosystem

Statement (navy) with underlying capabilities grouped under the AI at Scale Capability Model sections

Foundation / Governance = records, identifiers, access-rights, compliance & cost — proposed additions beyond the current AI Capability Model.

Unified Knowledge Repository

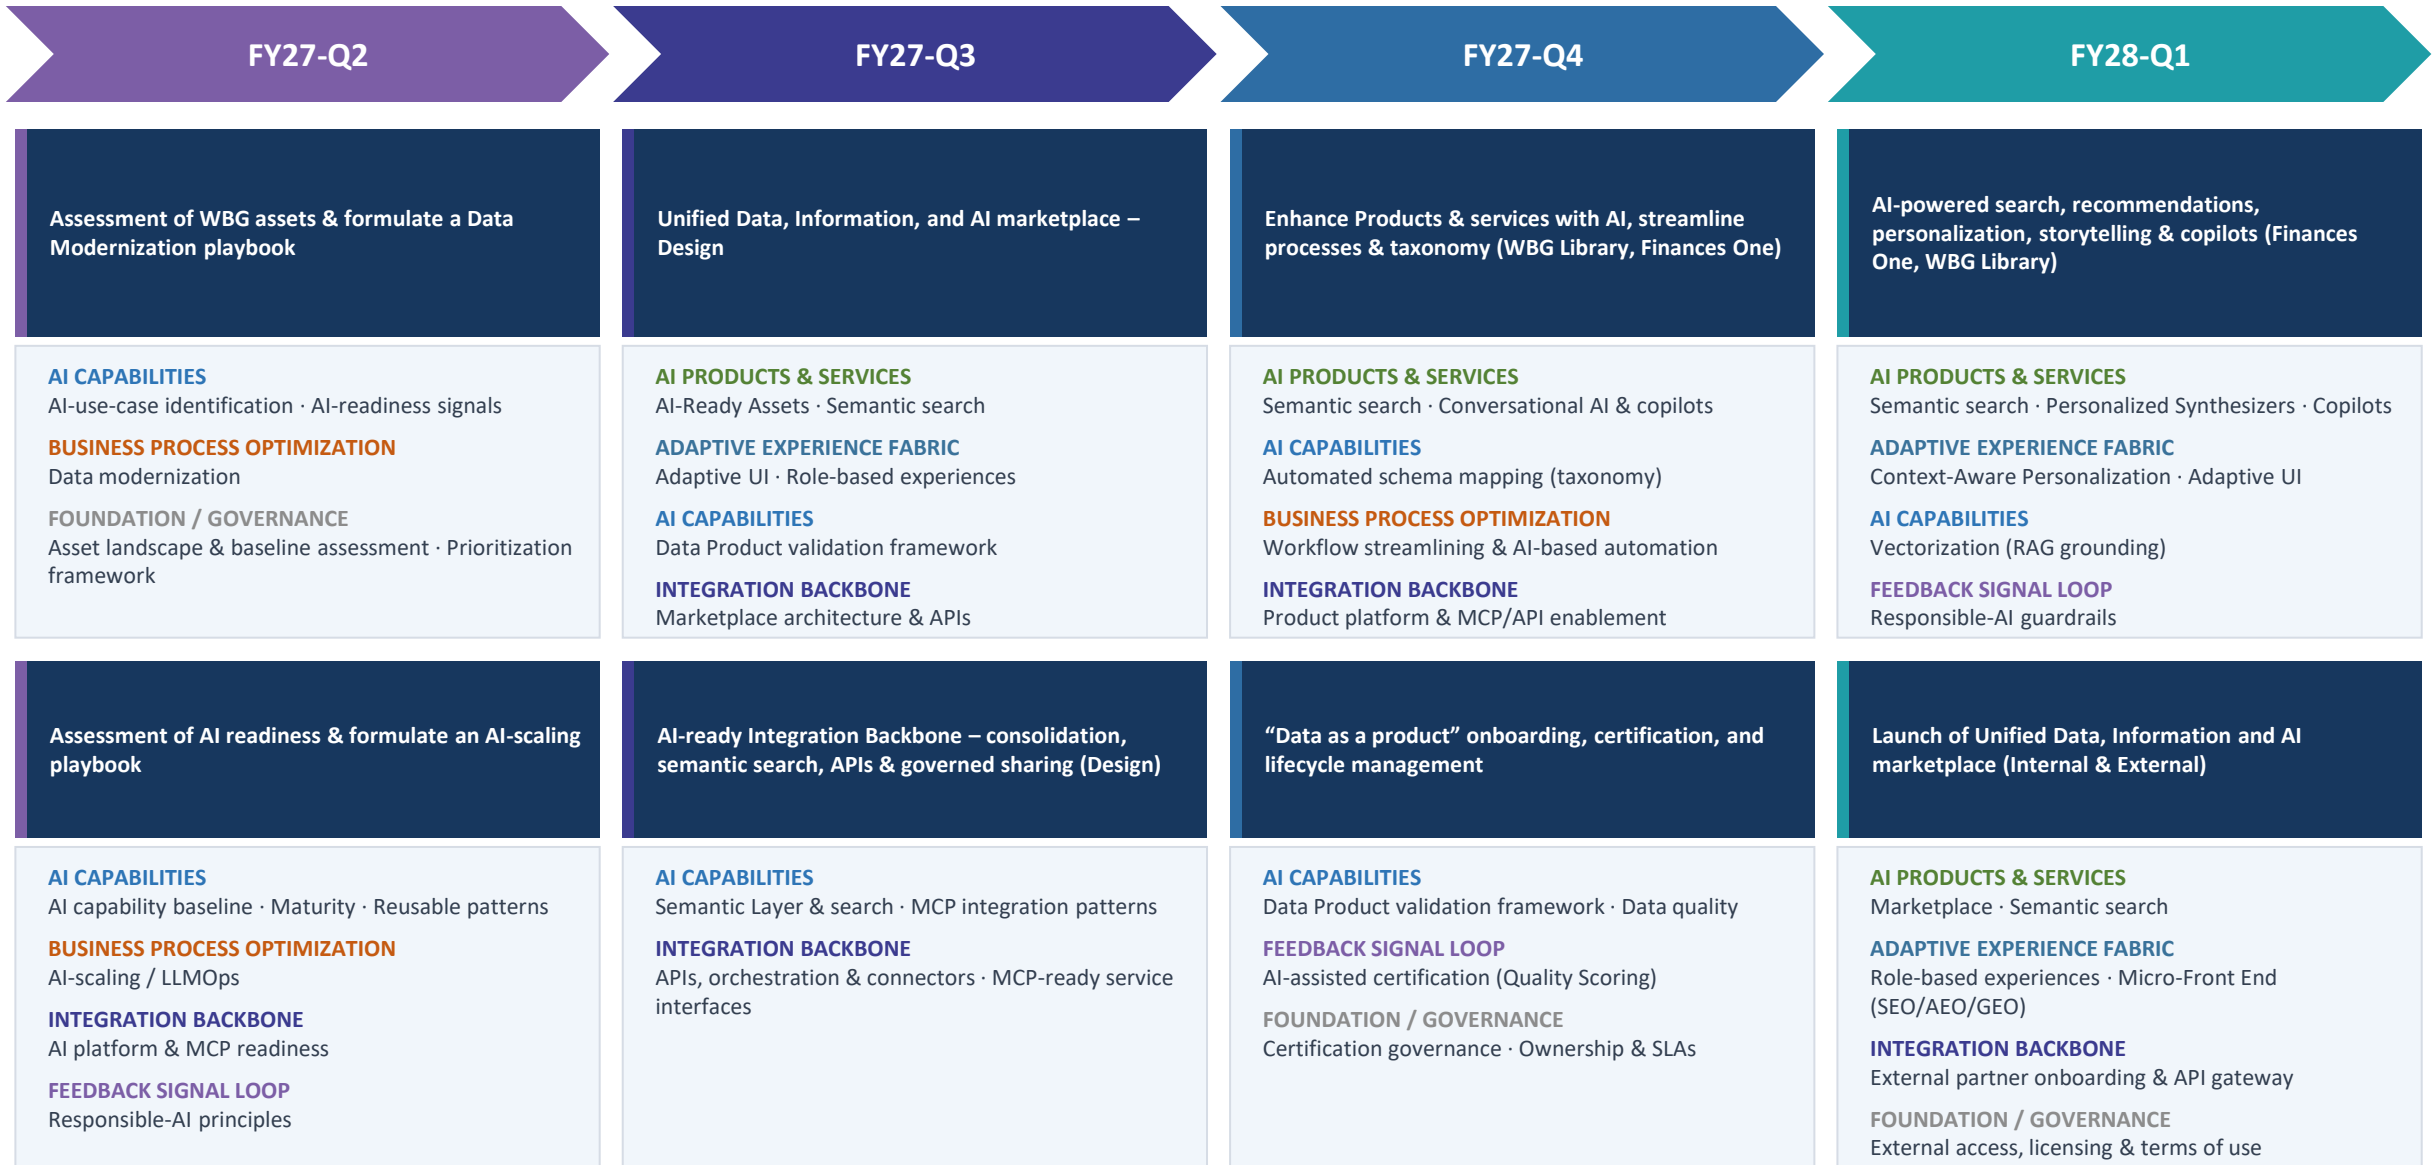

Statement (navy) with underlying capabilities grouped under the AI at Scale Capability Model sections

Data Consolidation — Structured

Statement (navy) with underlying capabilities grouped under the AI at Scale Capability Model sections

Data Consolidation — Unstructured

Statement (navy) with underlying capabilities grouped under the AI at Scale Capability Model sections

Foundation / Governance = records, identifiers, access-rights, compliance & cost — proposed additions beyond the current AI Capability Model.

AI at Scale: Next Steps

01. Capability Working Group

Collaborate on prioritized initiatives across Data, Information and AI FY27 work program and formulate the solution architecture.

02. Asses, Rationalize, Synergize

Deep-dive introspective on AI use cases and business value across data domains and verticals. Focus on rationalization, identification of synergies and prioritization.

03. Capability Roadmap

Prepare and finalize roadmap with key milestones aligning the product and services roll-out plan.

04. Community Of Practice (CoP) for AI

Socialize AI capabilities, use cases, best practices, success stories across the bank and other IFI's.

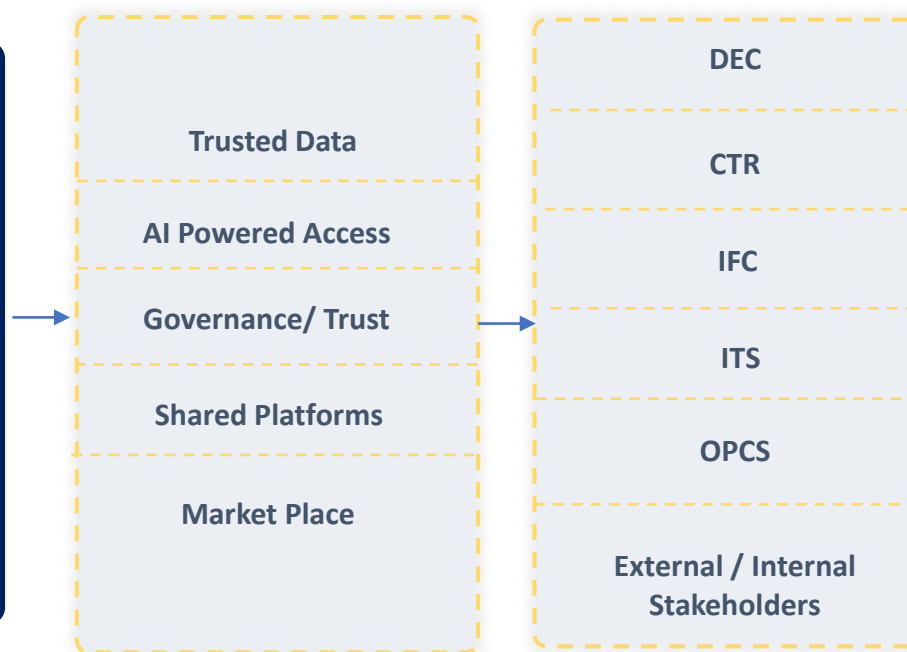

Thank You

Enabling AI across enterprise Data, Information, and Knowledge Products

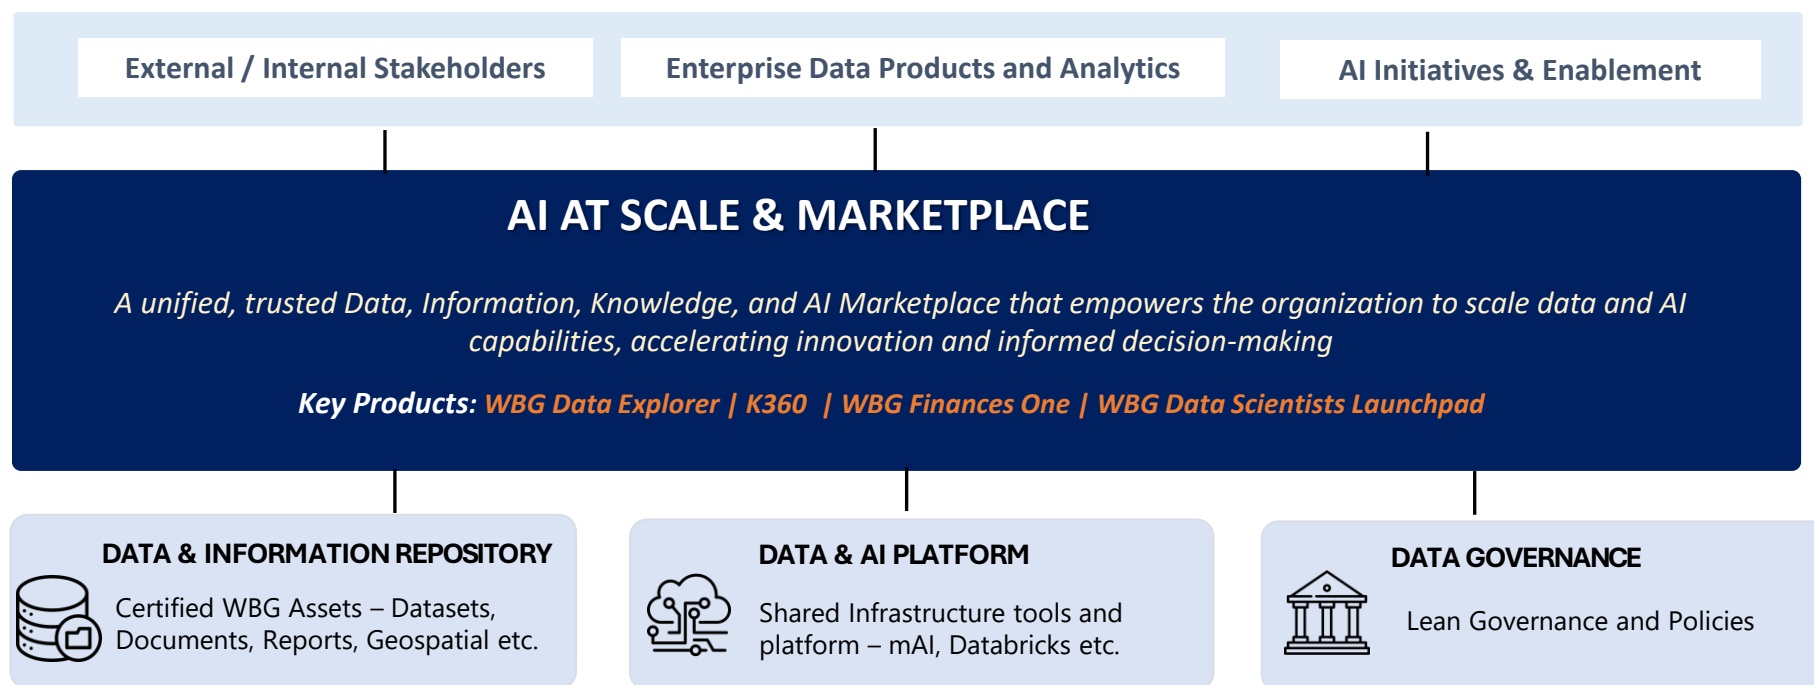

AI AT SCALE & MARKETPLACE

A unified, trusted Data, Information, Knowledge, and AI Marketplace that empowers the organization to harness data and AI capabilities, accelerating innovation and informed decision-making

Key Products: *WBG Library | WBG Data Explorer | WBG Finances One | Day 1 Portal*

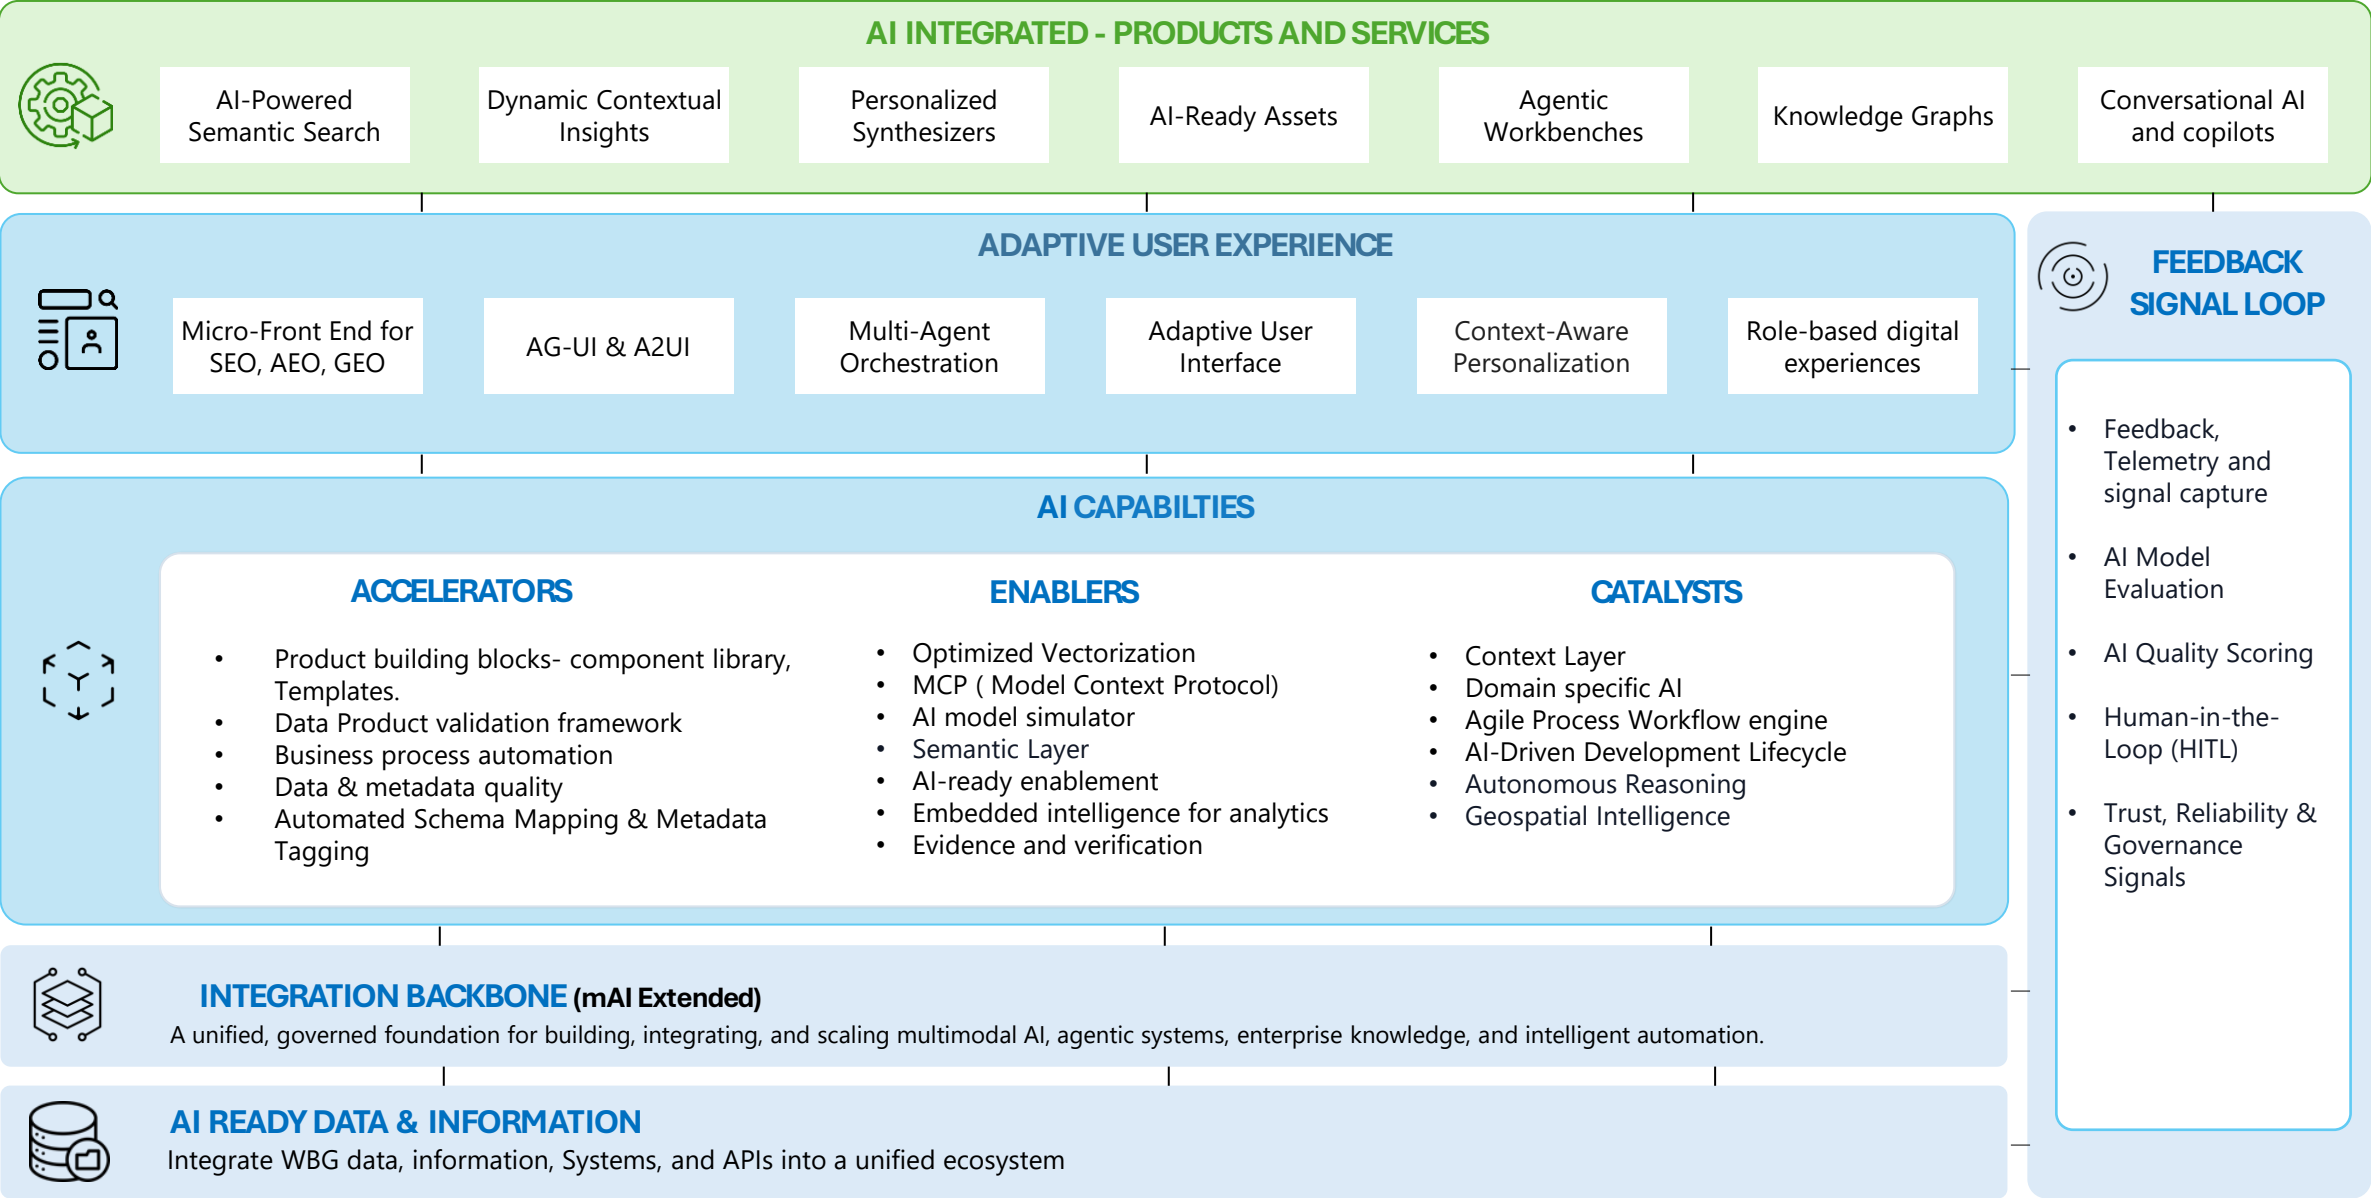

Scaling AI across enterprise Data, Information, and Knowledge Products

AI at Scale: WBG Library Use cases

Use case	Problem	Capability	Business Value
AI Research Assistant (Ask a Librarian 2.0)	Users spend significant time locating relevant resources across books, journals, reports, and subscriptions.	Natural language queries Multi-source search across library assets Citation-backed answers Follow-up questioning	Faster research Reduced librarian workload Improved self-service
AI-Powered Publication Summaries	Staff rarely have time to read 100+ page publications.	Executive summaries Policy summaries Sector-specific summaries Country-specific insights	
Development Knowledge Copilot	Knowledge is spread across reports, publications, and repositories.	Conversational access to WBG knowledge Grounded answers with citations Cross-document synthesis	Supports Knowledge Bank strategy Accelerates evidence-based decision making
Intelligent Recommendation Engine	Users only access content they already know.	Personalized recommendations Role-based suggestions Learning pathways	Increased resource utilization Better ROI on subscriptions
AI Metadata Generation	Metadata creation is manual and inconsistent.	Auto-tagging Subject classification Entity extraction SDG mapping Region/country classification	Better search Reduced maintenance effort
Citation Intelligence Platform	Verifying references is time-consuming.	Citation validation Hallucination detection Reference completeness Source credibility scoring	
Multilingual Knowledge Access	Language barriers limit knowledge reuse.	Real-time translation Multilingual search Cross-language retrieval	Supports regional teams Expands knowledge accessibility
AI Chatbot	Users need quick answers rather than documents.	Generate country briefs Sector snapshots Knowledge packs Executive talking points	

AI at Scale: Capability Model

AI at Scale Capability Roadmap

Progressively build trusted foundations, connect enterprise intelligence, optimize outcomes, and scale AI-enabled delivery.
